

Curve and widen strips

to enhance browse response, provide cover and minimize sightlines, windthrow, snow drift and piling

Leave trees along roads and in dense patches throughout

to reduce sightlines for hunters and predators and to increase cover

Retain non-merch conifer and deciduous species

in both patches and single trees

Rehabilitate roads after harvest

to reduce access and increase food supply and tree density

Cut in winter

to leave slash and enhance browse response

Do not use herbicides

for screening, cover and forage
